

Kimberly Cockerham, MD, FACS
Oculofacial Plastic Surgery
Eyelid & Orbital Oncology
Thyroid Eye Disease
Neuro-Ophthalmology

Patient Name: _____ DOB: _____

Informed Consent for Tepezza

Tepezza is the first and only FDA approved treatment for thyroid eye disease. The goal of the treatment is to improve your eye comfort, function and appearance. In clinical trials, Tepezza resulted in improved bulging, redness, swelling and double vision. Like every therapy, there are risks you should be aware may occur. Please notify Dr. Cockerham immediately if you are having side effects that persist more than 24 hours.

Side effects are usually mild and time limited and include:

- fatigue
- headache
- muscle spasms
- high blood sugars
- hair loss
- brittle nails
- diarrhea
- anxiety
- weight loss

Some patients have suffered more severe side effects that may be permanent:

- urinary tract infections
- urinary incontinence
- bloody or persistent diarrhea leading to inflammatory bowel disease
- bowel bladder fistula requiring surgery
- hearing loss or altered hearing
- new requirement for diabetic medication or increasing number of medications required

For Childbearing Woman:

This medication is not approved for woman who are pregnant or lactating

- I am not pregnant or lactating
- I am on effective birth control
- I understand I will need to have a pregnancy test before each infusion

For Diabetics and Pre-Diabetics:

- I understand I need to monitor my glucose and work closely with my primary care doctor or endocrinologist to keep my sugars under control
